

ABOUT FORENSCOPE

ForenScope has been a pioneer in forensic imaging systems for more than two decades, specializing in advanced imaging solutions for forensic professions.

Founded with a mission to revolutionize the field of forensic imaging, ForenScope develops state-of-the-art mobile, lab and hospital type devices. Designed to empower investigators with it's cutting-edge tools, ForenScope aims to change the traditional methods for evidence collection and analysis.

Mobility & Compactness

With ForenScope's mobile superspectral & multispectral imaging systems, you can carry the lab in your hand!

Wide Application Areas

ForenScope devices have the capacity to detect latent fingerprints, body fluids (semen, saliva, urine, etc.), blood traces, GSR, hair & fiber, teeth, bones, document & art examination, as well as touch DNA.

Contactless Investigation

Macro and micro evidence search and detection can be done 100% contactless.

Environment Friendly

ForenScope devices are capable of imaging without powder or chemicals.
